Influenza A Target 1

*Detection Kit for TaqMan® Probe Assays*

This kit and accompanying information is designed for the detection of Influenza A. This kit is for research use only and not for use in human diagnostic or epidemiologic procedures. Refer to the *Freeze-Dried Reagent Detection Kit Instruction Booklet for TaqMan Probes* (ASAY-PRT-0130, *Reverse Transcription PCR protocol for RNA*) for protocols, reagent setup, results analysis, and additional information.

**Software**

The instructions shown below are given for three R.A.P.I.D.® instrument models and software. Use the appropriate instructions for your system. System number can be found on the serial plate.

**Model 7200**

Select **Influenza A Target 1** from the Batch Test menu on the software screen.

**Models 9200 and LT**

Select **Influenza A Target 1** from the software wizard screen.
Validated Strains

This validated **Influenza A Target 1** assay shows no cross-reactivity against the following organisms and strains:

- Adenovirus, \( n=2 \)
- Human metapneumovirus, \( n=2 \)
- Human rhinovirus, \( n=2 \)
- Influenza B, \( n=2 \)
- Parainfluenza virus type 1, \( n=2 \)
- Parainfluenza virus type 2, \( n=2 \)
- Parainfluenza virus type 3, \( n=2 \)
- Respiratory syncytial virus, \( n=2 \)

**Note:** The **Influenza A Target 1** assay was positive when tested against 10 Influenza A isolates from humans. Specificity testing is currently in progress. Contact ITI for further information.

\( n = \) number of independent isolates tested
